

Electronics

[Baubuch des OV Soltau H43](#)

Collection of a few simple electronic gadgets that I built for and with kids (10-16 years).

[picprog](#)

My own approach to PIC programming under Linux. Includes everything you need, to program a Microchip 12F629/675 (or similar)...schematic and the core library, which uses the "ppprog" kernel driver.

[ppprog](#)

A Linux kernel driver for accessing the parallel port. Fully compliant with the parport module, is required for the picprog project.
